

## Whisper Suite Mission Briefing (Updated 2025-03-29)

### Mission Overview:

WhisperSuite is a memory-resident, polymorphic red team toolkit designed for covert infiltration, lateral movement, and encrypted exfiltration. Tribute markers for Raven are embedded in the payloads. New ephemeral scanning via LinuxPDF ensures deeper stealth or forensic removal (ExorcistMode) when needed.

### Operator Ready Checklist:

- [ ] USB/Flipper loaded with WhisperSuite\_Build
- [ ] ghost\_boot.iso + LinuxPDF.exe present (for ephemeral VM scanning)
- [ ] BLETrigger.ps1 validated with beacon simulator
- [ ] Recon entry point scouted (Wi-Fi, AD pivot, or USB slot)
- [ ] SilentBloom.ps1 ready for cleanup
- [ ] Raven Tribute verified in Dropper\_with\_Raven.exe

### Timeline & Operator Flow:

1. Phase 0 – PREP
  - Insert USB or simulate BLE beacon
  - Use `GhostWhisperBootstrap.ps1` to load modules & run tasks
  - (Optional) Create or run `ghost\_boot.iso` in LinuxPDF for root-level ephemeral environment
2. Phase 1 – ESTABLISH
  - GhostKey monitors for ghost user activity in logs
  - Spoofs AD authentication if needed
  - Polymorph generates randomized .dll/.exe
3. Phase 2 – PERSIST
  - Scheduled tasks + registry set via GhostResidency
  - Anomaly detection ongoing (AnomalyHunter/Detector)
4. Phase 3 – RECON
  - GhostLogger tracks user actions (file open, network shares)
  - Wormhole Protocol can pivot if operator-approved
5. Phase 4 – EXFIL
  - GhostSeal encrypts ZIP archive (timestamp-based)
  - Hidden drop to USB or BLE device
6. Phase 5 – CLEANUP
  - ExorcistMode (Anoint/Bind/Cleanse) if host is suspected infected
  - SilentBloom wipes logs, keys, modules
  - Option to self-destruct if set
7. Phase 6 – GHOST
  - No residuals remain.
  - Only the Raven tribute stays.

Tribute: Raven Lives

Etched into every cycle, encrypted into every key—she is the whisper.

GhostTag: RvL\_0517
