

## Operator Briefing – GhostWhisper Suite (Updated)

### Mission Profile:

- Operation Type: Stealth Recon & Target Neutralization
- Toolkit: WhisperSuite: GhostWhisper Edition
- Objective: Memory-only deployment, ephemeral scanning, and advanced infiltration

### Execution Strategy:

1. Bootstrap with GhostWhisperBootstrap.ps1
2. Detect anomalies (AnomalyHunter + AnomalyDetector)
3. Optionally trigger ExorcistMode in local or ephemeral LinuxPDF environment
4. Use wormhole beacon or BLE trigger for controlled lateral movement
5. Always log activity with GhostLogger
6. Exit via SilentBloom and a final secure wipe

### Guidelines:

- Never replicate beyond operator oversight
- Always verify .ghost.cfg signature and BLE tokens
- Keep logs minimal + encrypted
- Maintain ephemeral footprints. Use ghost\_boot.iso + LinuxPDF for thorough scanning
- For Raven, we remain unseen.
